OUR GOAL IS SIMPLE.

Help you feel great in your skin **Everyday.**

Discover the world of body contouring at BalaBala Laser Clinic.

Introducing truSculpt, an advanced body contouring treatment that is clinically proven to reduce fat cells by an average of 24% per treatment area¹.

BalaBala Laser Clinic was the first clinic in South Australia to introduce the truSculpt body contouring treatment in 2019 - making us the most experienced truSculpt clinic in SA.

Our Clinic Director and registered nurse, Dana Zhang, chose truSculpt after giving birth to her son. She was looking for a treatment device that could help her lose some stubborn fat that she had gained through her pregnancy. Dana chose truSculpt as it has no downtime, which is great for new mums.

truSculpt™

For fat reduction with no downtime.

truSculpt® is a revolutionary, non surgical body contouring treatment that allows you to personalise your best body in as little as one comfortable 15-minute treatment.

truSculpt® is TGA and FDA approved, safe and clinically proven treatment to reduce fat cells and decrease circumference in stubborn areas, such as around the abdomen and flanks. With truSculpt®, you can get the body definition you want, even in areas that have been resistant to diet and exercise.

Fast, as little as 15 minutes

HOW IT WORKS

truSculpt uses non-invasive monopolar radiofrequency technology to selectively and safely target fat cells for the slimmer shape you're seeking.

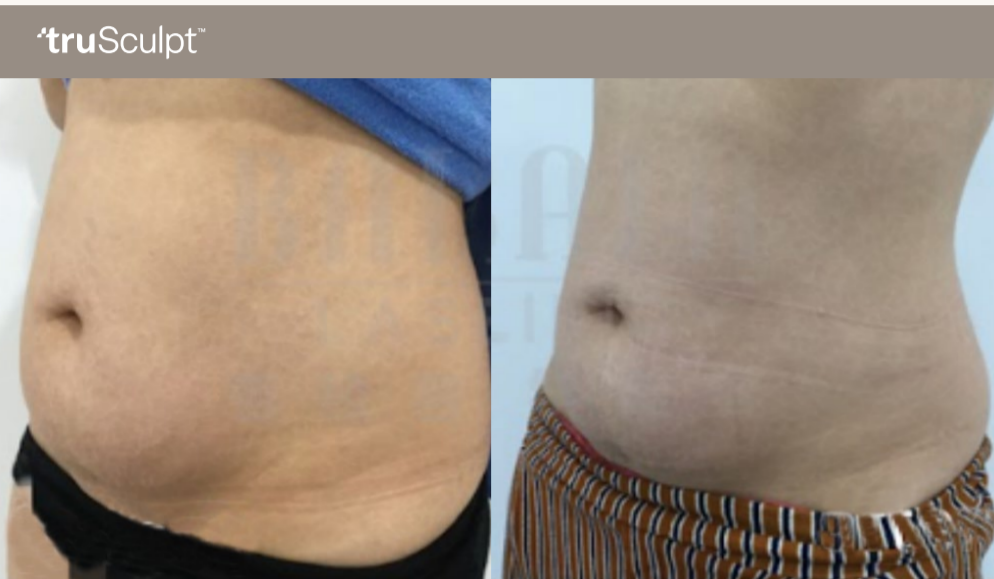

- 1 truSculpt delivers gentle heat to damage targeted fat cells?
- 2 Real-time temperature control ensures a comfortable treatment experience for you
- 3 After a 15-minute treatment, the damaged fat cells are eliminated from the body naturally over a period of 12 weeks?

Common Questions

EACH SESSION: 30 Minutes	DOWNTIME: None	STARTING AT: \$399

How It Works?

truSculpt uses innovative Monopolar RF technology to selectively target and damage fat cells using heat, eliminating them from the body naturally and safely. Clinical studies resulted in an average of 24% fat reduction per treatment area.

How Long Does It Take?

The treatment time is dependent on the treatment size and how many areas are treated. Treatment time is 15 minutes per treated area.

How Many Treatments Are Needed?

Visible results are typically achieved with one truSculpt session. Additional treatments may be required to achieve the personalized results you desire.

How Does It Feel?

truSculpt treatments are typically described as warm but tolerable. During treatment, the temperature of your skin will rise but remain comfortable. The heat may be adjusted for your comfort. Results are even and consistent.

Any downtime?

truSculpt treatments are non-invasive, require no recovery time, and allow you to immediately return to normal activities after treatment. After treatment, the treated area may be warm and flushed for one hour.

Can I Treat Arms Or Legs?

Go sleeveless or wear shorts with full confidence: targeted arm and leg treatments will improve shape, definition and contouring. Treatments can be done on upper arms, inner and outer thighs of all shapes and sizes even on areas with skin laxity. Feel better in your clothes, look better out of your clothes and flaunt your youthful shape.

When Will I See Results?

Optimal results are seen after 12 weeks. To achieve your personal goals, additional treatments may be required.

How Is This Different Than Other Body Contouring Procedures?

truSculpt is customizable depending on your body type and goals allowing you to isolate and target the areas you want to improve and treat multiple areas simultaneously in one quick, easy session. This procedure is versatile and effective to treat a wide range of clients who may not be a candidate for other contouring procedures due to treatment location, skin type, fat thickness and presence of skin laxity. There is no visible downtime after the procedure and normal activity can be resumed immediately.
